## Industrial Grade Software Solution for ALL Pointing Devices!

The Build-A-Board on-screen interface integrates within the O/S environment seamlessly, allowing any pointing device to eliminate the need for a physical keyboard! Any Mouse, Pen, Tablet, Touchscreen, or other pointing device can take advantage of the Build-A-Board on-screen interface in any graphic mode or hardware configuration.

**MICROSOFT  
WINDOWS  
COMPATIBLE**

Windows 2k, XP, Vista, 7, TS  
Windows CE, Linux, OSX

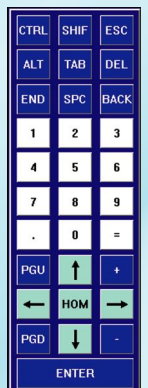

OEM Developer versions,  
Individual Components, Site and  
Enterprise Licenses are available.

## The Worlds Premier On-Screen Keyboards!

We started with the on-screen keyboards technology originally created in My-T-Soft, then added a customizable user designer with our Build-A-Board Tool to address the needs of Pen, Tablet, & Touchscreen OEMs, users, developers, and integrators everywhere!

Build POS, Kiosk Systems, or replace outdated plastic keypad and Membrane Panels with newer virtual ones. Virtual buttons and membrane panels maintain the original, familiar look and feel while allowing fast modifications and updates as processes change.

**User Interface  
Enhancement**

# Build-A-Board

## The Build-A-Board Concept

Build-A-Board came out of the support relationships with our OEM's and Systems Integrators. It was originally conceived to resolve a number of issues. First, was in answer to the typical "We love your product, its perfect! Now can you change it for us? The second was "we have limited power, resources, or needs, and want a couple of simple multi-key panels with only the keys and functions the user absolutely needs to get the job done". The third was "we have equipment with several input types, different size displays, and running under different Operating Systems, can we roll out one standard user interface?" And finally, "we've change a process in the plant and we need to change the operators input panel to match, can we do that?"

Build-A-Board was designed to respond to all of those needs. Especially with security, validation, and system maintenance, where the user is viewed as an operator (rather than a highly privileged user), so removing function keys or system control keys that would otherwise be available is an absolute necessity. A situation where a physical keyboard just can't compete in a costly and timely manner. These are just some of the many benefits of a custom programmable on-screen key panel interface.

Easy-to-use layout engine

Create new layouts or modify pre-built templates

Pre-built common layouts and templates

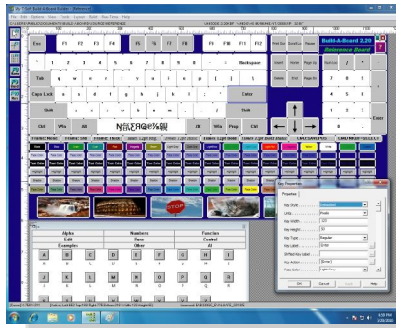

Integration of text, fonts, and images

Run-times for Linux, Windows CE thru 7, and Mac OSX

Complete control of system from O/S and application level

## Powerful Software!

OEM Developer versions, Individual Components, Site and Enterprise Licenses are available.

Rock-solid, tested & field proven code

Integrates with industry applications

Developers Integration (SDK) Kit included

With the IMG Build-A-Board Designer Tool, you can:

- Replace or create any key, keyboard, or membrane layout
- Cut / Copy / Paste & Drag & Drop layout design
- ASCII, ANSI, Images, & Int'l Character Codes Supported

- Select Fonts, Colors, and Images on Keys & Buttons
- Align, Space, Size, Group, and Center Keys
- Run Macros, Launch Programs, even play Wav Files

- Build for Multiple Target systems within Builder
- Build & Test separately from Target system
- Save and Manage Projects
